ShopSmart API examples

Start the application with **npm run dev**, then send these requests through Bruno or another authorized API client.

Health check

```
GET http://localhost:3000/api/health
```

Product list

```
GET http://localhost:3000/api/products
```

One product

```
GET http://localhost:3000/api/products/1
```

Create a simulated order

```
POST http://localhost:3000/api/orders
Content-Type: application/json

{
  "customerName": "Ana Reyes",
  "email": "ana@example.com",
  "address": "Angeles City, Pampanga",
  "items": [
    { "productId": 1, "quantity": 1 },
    { "productId": 2, "quantity": 1 }
  ]
}
```

The server ignores prices from the browser and reads authoritative prices from PostgreSQL.

Ask the starter assistant

```
POST http://localhost:3000/api/assistant/questions
Content-Type: application/json

{
  "question": "Which keyboard is below ₱2,000?"
}
```
